internationally recognised researchers look at developing trends in combinatorics with applications in the study of words and in symbolic dynamics they explain the important concepts providing a clear exposition of some recent results and emphasise the emerging connections between these different fields topics include combinatorics on words pattern avoidance graph theory tilings and theory of computation multidimensional subshifts discrete dynamical systems ergodic theory numeration systems dynamical arithmetics automata theory and synchronised words analytic combinatorics continued fractions and probabilistic models each topic is presented in a way that links it to the main themes but

then they are also extended to repetitions in words similarity relations cellular automata friezes and dynkin diagrams the book will appeal to graduate students research mathematicians and computer scientists working in combinatorics theory of computation number theory symbolic dynamics tilings and stringology it will also interest biologists using text algorithms

an expanded and updated edition of a comprehensive presentation of the theory and practice of model checking a technology that automates the analysis of complex systems model checking is a verification technology that provides an algorithmic means of determining whether an abstract model representing for example a hardware or software design satisfies a formal specification expressed as a temporal logic formula if the specification is not satisfied the method identifies a counterexample execution that shows the source of the problem today many major hardware and software companies use model checking in practice for verification of vlsi circuits communication protocols software device drivers real time embedded systems and security algorithms this book offers a comprehensive presentation of the theory and practice of model checking covering the foundations of the key algorithms in depth the field of model checking has grown dramatically since the publication of the first edition in 1999 and this second edition reflects the advances in the field reorganized expanded and updated the new edition retains the focus on the foundations of temporal logic model while offering new chapters that cover topics that did not exist in 1999 propositional satisfiability sat based model checking counterexample guided abstraction refinement and software model checking the book serves as an introduction to the field suitable for classroom use and as an essential guide for researchers
